

## FUJI: Care & Maintenance Tips

Your mats are of the highest quality and made to perform for many years. To keep your mats looking great, we recommend the following:

Use a suction vacuum when needed to lift and remove dust, debris, hair, etc. A microfiber mop works well too for quicker cleans between classes if needed.

After you dust. Mop your floor with a damp microfiber mop, or lightly spray with and mop. You don't need much water, just enough to wet the surface to disinfect. Use a small amount of mild detergent + degreaser solution in warm water. Let air dry.

- Always test your solution first on a small, inconspicuous area or a sample.
- Avoid detergents that leave a film on your mats (like Pine Sol).
- Avoid high corrosives; bleach at a 1 oz / gallon ratio can be used as well, but don't over bleach.

Enjoy your Fuji Floor System for a long time to come!
